

MicroLoc Kit-75

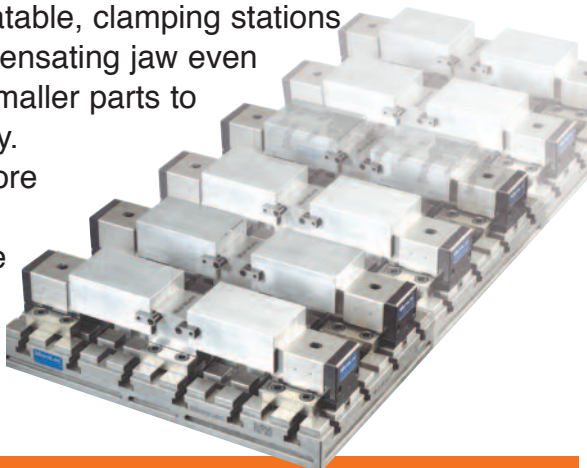

A complete system ready to use!

Micron Workholding Limited introduce a simple solution for the business which needs a versatile, cost-effective, and easily expandable, workholding system for machining centres.

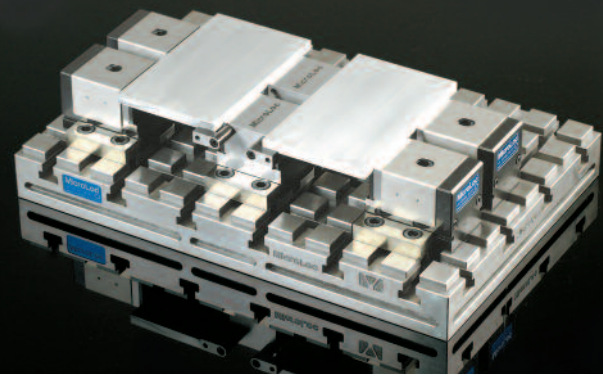

VERSATILE WORKHOLDING

- Just the one size of baseplate provides one, two, or four accurate, repeatable, clamping stations
- The MicroLoc compensating jaw even allows up to eight smaller parts to be clamped securely.
- You can add two more clamping stations in-between, or place more baseplates alongside for increased versatility and productivity!

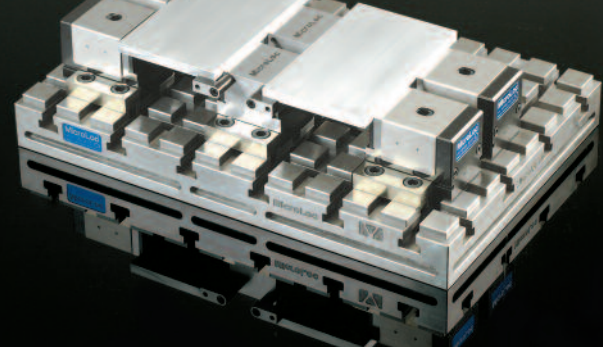

Just look at what the Kit-75 can do....

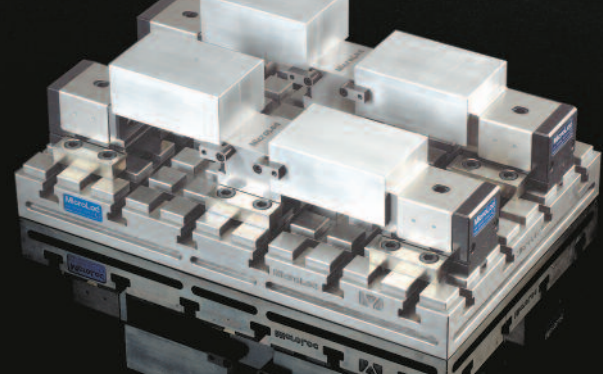

Hold a thin plate on workblade supports...

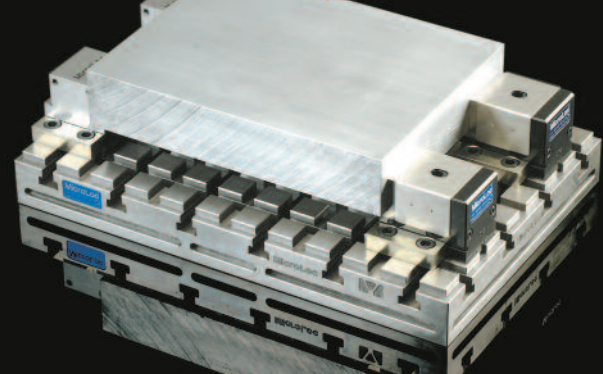

Clamp two medium sized parts by ganging laws together using the double-sided sideclamps supplied in the kit...

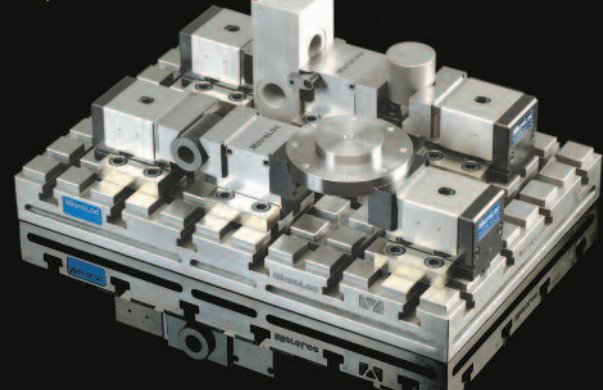

Support two pairs of parts at different heights, grip on as little as 2.5mm...

Hold a large block across two clamping jaws with a total of 2.5 tonnes clamping force...

Add a few simple accessory jaws to hold a variety of parts simultaneously...

A Box Full of Ideas...

Contents of the kit:

- 1 Reference Baseplate, 450 x 300 x 55mm
- 4 Clamping Unit, complete
- 2 Locator (Fixed Jaw) complete
- 3 Double-sided sideclamp
- 1 Toolkit
